

Hanco Cyber Security

Our top five
cyber solutions

Dark web monitoring

The key feature of our dark web monitoring is the human factor

Having this human element allows for the noise to be cut and real threats to be raised

This is essentially an extension of a secure human arm around your privacy, protection, and brand image.

Saves money, saves time!

hanco.global/dark-web

Compromised users happen more often than you think,
with staff personal details and business transactions
showing up where it should not.

Pwned is a *superficial* look, we do a **deep dive** where we monitor a wide variety of possible areas of concern in the dark web and elsewhere including:

- ## hanco.global/dark-web

What really makes Hanco Dark Web stand out?

We don't just look!

Pwned is a case of looking, our dark web monitoring & investigation provides the ability for remediation of stolen data and when an attack can happen

We monitor 24/7/365, whereas other dark web services will give you a lot of unnecessary noise with reports, where it takes a lot of time to sift through the results to gain something meaningful.

Those competitor services can be *very expensive!* Hanco offers our Dark Web solution at much more competitive rates once scoping is conducted.

Our SIEM & Compliance Solutions

Essential for any company!

Data is the basic necessity of your organisation. We will empower your security team to analyse your data environment.

- Your security/IT teams will be empowered to automatically analyse what is happening across your data environment
- By monitoring continuously, unauthorised access to sensitive data is eliminated,
- We will help you to adapt to changing environments (governance/industry compliance, technology, and deployment models) in order to shield the data.

hanco.global/compliance-package

**Keep an eye on
cybersecurity incidents,
alerts and your
vulnerabilities!**

hanco.global/pricing-siem

We have you covered!

With our Data security, HancoShield™, Incident response, Hanco compliance package, and Vulnerability solutions.

- [Asset Management](#)
- [Our HancoShield™ Enterprise Suite](#)
- [Our HancoShield™ SME Starter pack](#)
- [Log Management \(SIEM\)](#)
- [Vulnerability Scanning and Reporting](#)
- [Vulnerability Assessment](#)
- [Full-scale Scanning, Testing and Reporting](#)
- [Incident Response](#)
- [Hanco Compliance Package](#)

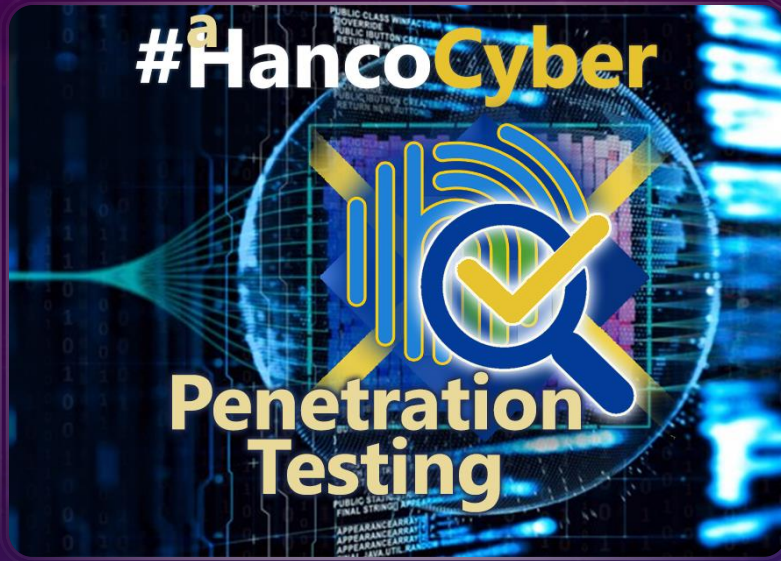

Managed Detection and Response (MDR)

When something happens,
Hanco is Here™!

Our HancoShield™ Incident Response will allow you to remotely manage your environment and respond to attacks right from your own dashboard.

hanco.global/incident-response

- Your security/IT teams will be **empowered** to automatically analyse what is happening across your data environment .
- By monitoring continuously, unauthorised access to sensitive data is eliminated,
- We will help you to adapt to changing environments (governance/industry compliance, technology, and deployment models) in order to shield the data.

hanco.global/penetration-testing

hanco.global/full-scale

The most important first step in evaluating your vulnerabilities!

← This well-priced solution is a popular favourite with our clients, and has yielded *significant* results.

Let us Attack You!

Our HancoShield™ Penetration Testing will find out how someone might get in to your network!

We do *not* believe it should be that expensive to see if your systems are hackable.

In order to protect your company, we will provide state-of-the art penetration testing to see how healthy your firewalls are.

We establish an overview of these successful penetrations and will provide a penetration test report to you.

hanco.global/active-endpoint

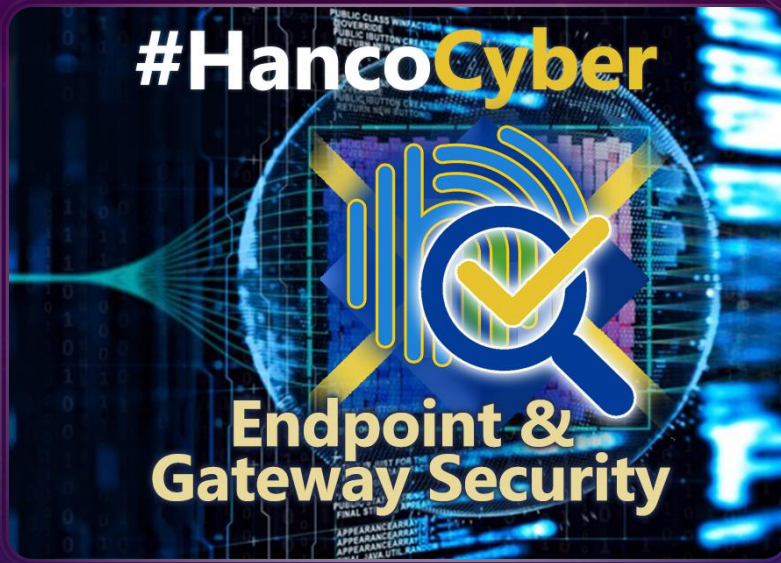

**Guard against attacks
(phishing, mishing and
other social engineering)
from cybercriminals.**

Protect your Endpoints

More and more users are logging into an increasing number of networks using their personal devices.

The need to secure and protect these is just as important as securing the corporate devices.

More and more users are logging into an increasing number of networks using their personal devices, and the need to secure and protect these is just as important as securing corporate devices.

hanco.global/active-endpoint

- **Protect against unknown & sophisticated threats Prevent damage to data & assets**
- **Reduce reputational risk**
- **Reduce operational burden for CISOs/IT Managers**

Protect your Endpoints

The threat landscape is complex
Every employee must take some responsibility to ensure e-mail security.

Human error is inevitable, but through our Active Endpoint Detection system or our HancoShield™, you will be protected.

Our three main protection solutions help protect your endpoints:

- [Asset Management](#)
- [HancoShield](#)
- [Active Endpoint Detection](#)
